

# Senior Data Engineer

Pranav Patil  
7249466676  
patilpranav6676@gmail.com

## OBJECTIVE

Data Engineer with over 4+ years of experience in data engineering, analysis, and cloud-based solutions. Skilled in designing and optimising data pipelines using AWS, Python, and SQL. Hands-on experience with Apache Spark, Kafka, Airflow, and NoSQL for large-scale data processing. Proficient in CI/CD, Terraform, Docker, and monitoring tools like Dynatrace and CloudWatch. Passionate about automation, performance optimisation, and modern data technologies. Experienced in end-to-end system design and data architecture, building scalable solutions across AWS, Azure, Databricks, and Snowflake environments.

## SKILLS

Python

SQL

AWS

Pyspark

ETL / ELT

Terraform cloudformation

Concourse CI/CD

Kafka

Airflow

Power BI / Tableau

REST API

Hive NoSQL

Docker

Azure

DynamoDB

Fastapi

Data modeling/Warehouse

Databricks

Delta Lake

Snowflake

Docker

DBT

Git (version control)

## EXPERIENCE

2022-03 - 2023-05

Associate data engineer

**Go Digital Technology Consulting LLP**

Built and automated ETL pipelines using Python, Airflow, and AWS EMR to streamline data processing and integration, improving data quality and processing efficiency through optimization and validation frameworks.

2023-05 - 2024-06

Data engineer

**Go Digital Technology Consulting LLP**

Designed and deployed scalable data pipelines using AWS, Spark, and Kafka, translating business requirements into robust technical solutions while leveraging Docker and CI/CD pipelines for consistent deployments. Improved pipeline reliability, performance, and monitoring through DevOps automation practices.

2024-06 - .

Senior data engineer

**Go Digital Technology Consulting LLP**

Leading end-to-end system design for scalable batch and real-time data platforms on AWS, defining architectures across ingestion, processing, and analytics while implementing Docker-based containerization and DevOps CI/CD best practices. Providing technical leadership, mentoring engineers, and optimizing performance and cost to deliver reliable, production-grade data systems.

## PROJECTS

## **Outage Verification Tool (OVT):**

Duration:2 year

### **Data engineer / Senior data engineer**

Designed and developed a real-time Outage Verification Tool, leveraging Confluent Kafka to ensure end-to-end data integrity and improve incident detection accuracy by 30%.

Implemented scalable data pipelines using Apache Airflow DAGs, enabling automated job scheduling and reducing manual operational overhead by 40%.

Engineered and automated a Kafka orchestration utility to manage complex data architectures, enhancing pipeline performance and ensuring seamless real-time data processing.

Built and deployed CI/CD pipelines using Concourse CI, automating Docker image creation, testing, and deployment to Amazon ECR, improving release efficiency by 35%.

Integrated Dynatrace monitoring with the CI/CD pipeline to enable real-time failure detection and automated ticket creation, resulting in 25% faster incident resolution.

Designed and implemented SCD Type 1 & Type 2 data processing pipelines to manage historical data tracking, ensure data consistency, and support accurate analytical reporting across evolving datasets.

Collaborated across teams to establish observability, automation, and deployment best practices, ensuring system reliability and continuous delivery excellence.

## **Power Management and Battery Analysis (PMBA):**

Duration:1 year

### **Data engineer**

Designed and implemented scalable ETL pipelines using PySpark, AWS Glue, and Apache Airflow, enabling high-performance data processing and reducing data latency by 40%.

Developed interactive Power BI dashboards that deliver actionable business insights, improving data-driven decision-making across teams.

Integrated Power BI dashboards with cloud-based data sources (AWS RDS, S3, Athena, Glue Catalog) to build dynamic, real-time visualizations with automatic data refresh.

Created RESTful API integrations to enable Power BI embedding and dynamic data access, enhancing scalability and user experience for analytics users.

Built a fully automated Data Quality Validation utility, performing real-time data checks and storing results in AWS RDS for auditability and monitoring.

## **Grid modelling service (GMS): Associate Data engineer**

Duration:1 year

Designed and built end-to-end data ingestion and cleansing pipelines on AWS using EMR for large-scale batch processing, ensuring high performance and fault tolerance.

Implemented secure ingestion workflows and optimized querying in Amazon Neptune to enable relationship-based analytics and faster query responses.

Developed AWS Fargate tasks for automated data insertion and analysis, and built a worker service to pull, process, and forward data to external APIs for downstream consumption.

Automated testing and validation pipelines using EventBridge and

Lambda, generating real-time monitoring reports in Amazon S3 to improve data reliability and visibility.
